Black Lanyard 10mm with Safety Breakaway & Metal Lobster Clip
Our 10mm Black Lanyard is the perfect economical choice for your lanyard requirements! Made from a comfortable rPET (recycled) material.

rPET (Recycled) Polyester
On the other hand, rPET (recycled) polyester is made from recycled plastic bottles or other post-consumer waste materials such as fishing nets or industrial scraps.

This type of fabric has all of the same properties as standard polyester but with one major difference: it's much more eco-friendly! By using recycled materials instead of new ones in its production process, rPET helps reduce our reliance on non-renewable resources while also reducing our carbon footprint by decreasing landfill waste.

Benefits Of Using rPET Over Standard Polyester
There are several benefits associated with using rPET over standard polyester:

- Eco-Friendly: As mentioned above, using recycled materials in place of new ones helps reduce our reliance on non-renewable resources while also reducing our carbon footprint by decreasing landfill waste. This makes rPET a much more eco-friendly option than standard polyester!
- Cost Effective: Not only does using recycled materials help reduce environmental impact but it can also save money too[1]! Since less energy is required to produce this type of fabric compared to traditional methods – costs associated with production are often lower which can result in savings being passed onto consumers or businesses who choose this option over standard rPET.
- Durability & Quality: Despite being made from recycled materials – rPET still offers excellent durability and quality comparable to that found in traditional polyester without sacrificing any performance characteristics such as breathability or comfort level when worn against skin contact areas like t-shirts etc. Additionally – since these types of fabrics don't require any additional chemical treatments during their manufacturing process they tend not to be prone to fading over time either making them an ideal choice for long-lasting lanyards that won't need replacing anytime soon!
- Overall – choosing an eco-friendly option like rPET over traditional polyester can have numerous benefits both environmentally speaking and financially speaking too! So if you're looking for a sustainable alternative that won't break your budget then consider ordering rPET today!

[1] – According to a report by the World Resources Institute, recycled polyester (rPET) is up to 30% cheaper than standard polyester. The report found that the cost savings were due to the lower energy requirements and fewer chemical treatments needed in its production process. https://www.wri.org/
